## NOTICE:

### Regarding Electricity System Upgrades behind Your Residence

Thunder Bay Hydro (TBH) is in the process of upgrading the electricity system by replacing the poles and overhead wires throughout your neighbourhood. This upgrade will improve the reliability of the equipment in the area and make the system more efficient. Area surveys are planned to begin in October of 2017 and construction will occur from Spring 2019 to December 2020.

#### Easement Access

Beginning in October 2017, TBH employees and subcontractors **will need to access the utility easement located in the backyard at the notified addresses** to perform an initial assessment of the pole locations and their corresponding anchors. The initial assessment will be followed by a final survey of the new pole locations. Crews will then commence with digging pole holes in the set locations for setting by crane per the construction schedule.

New poles and anchors will be situated in the utility easements where the existing distribution system is located. For reference regarding TBH rights of access to utility easements, please see the *Electricity Act, 1998 S.O. 1998, CHAPTER 15, Schedule A, 40.1*<sup>1</sup>

#### Questions

If you have any concerns or questions, please call:

**Mark Backor, Line Construction Supervisor at 343-1176**  
**Jonathan Murphy, U/G and Construction Supervisor at 343-1176**
